## 4 Configuration Interaction

### 4.1 Multiconfigurational Wave Functions and the Structure of Full CI Matrix

#### 4.1.1 Intermediate Normalization and an Expression for the Correlation Energy

**Ex 4.1** If  $a \notin \{c, d, e\}$  and  $r \notin \{t, u, v\}$ ,

$$\langle \Psi_a^r | \mathcal{H} | \Psi_{cde}^{tuv} \rangle = 0 \quad (4.1.1)$$

Let's suppose  $a = e$ , thus

$$\langle \Psi_a^r | \mathcal{H} | \Psi_{cde}^{tuv} \rangle = \langle \Psi_a^r | \mathcal{H} | \Psi_{acd}^{vtu} \rangle \quad (4.1.2)$$

if  $r \neq v$ , this term will still be zero, thus

$$\sum_{c < d < e, t < u < v} c_{cde}^{tuv} \langle \Psi_a^r | \mathcal{H} | \Psi_{cde}^{tuv} \rangle = \sum_{c < d, t < u} c_{acd}^{rtu} \langle \Psi_a^r | \mathcal{H} | \Psi_{acd}^{rtu} \rangle \quad (4.1.3)$$

**Ex 4.2**

$$\begin{vmatrix} -E_{\text{corr}} & K_{12} \\ K_{12} & 2\Delta - E_{\text{corr}} \end{vmatrix} = 0 \quad (4.1.4)$$

$$-E_{\text{corr}}(2\Delta - E_{\text{corr}}) - K_{12}^2 = 0 \quad (4.1.5)$$

$$E_{\text{corr}} = \frac{2\Delta \pm \sqrt{4\Delta^2 + 4K_{12}^2}}{2} = \Delta \pm \sqrt{\Delta^2 + K_{12}^2} \quad (4.1.6)$$

choosing the lowest eigenvalue,

$$E_{\text{corr}} = \Delta - \sqrt{\Delta^2 + K_{12}^2} \quad (4.1.7)$$

**Ex 4.3** At  $R = 1.4$ ,

$$\begin{aligned} \Delta &= \varepsilon_2 - \varepsilon_1 + \frac{1}{2}(J_{11} + J_{22}) - 2J_{12} + K_{12} \\ &= 0.6703 + 0.5782 + \frac{1}{2}(0.6746 + 0.6975) - 2 \times 0.6636 + 0.1813 \\ &= 0.78865 \end{aligned} \quad (4.1.8)$$

$$E_{\text{corr}} = \Delta - \sqrt{\Delta^2 + K_{12}^2} = 0.78865 - \sqrt{0.78865^2 + 0.1813^2} = -0.020571 \quad (4.1.9)$$

$$c = \frac{E_{\text{corr}}}{K_{12}} = \frac{-0.020571}{0.1813} = -0.1135 \quad (4.1.10)$$

As  $R \rightarrow \infty$ ,  $\varepsilon_2 - \varepsilon_1 \rightarrow 0$ , all 2e integrals  $\rightarrow \frac{1}{2}(\phi_1\phi_1|\phi_1\phi_1)$ , thus

$$\lim_{R \rightarrow \infty} \Delta = 0 + \lim_{R \rightarrow \infty} \left[ \frac{1}{2}(J_{11} + J_{22}) - 2J_{12} + K_{12} \right] = 0 \quad (4.1.11)$$

$$\lim_{R \rightarrow \infty} E_{\text{corr}} = - \lim_{R \rightarrow \infty} K_{12} \quad (4.1.12)$$

$$\lim_{R \rightarrow \infty} c = \lim_{R \rightarrow \infty} \frac{E_{\text{corr}}}{K_{12}} = -1 \quad (4.1.13)$$

As  $R \rightarrow \infty$ , the full CI wave function will be

$$|\Phi_0\rangle = |\Psi_0\rangle - |\Psi_{11}^{22}\rangle = |\psi_1\bar{\psi}_1\rangle - |\psi_2\bar{\psi}_2\rangle \quad (4.1.14)$$

Since

$$\psi_1 = \frac{1}{\sqrt{2(1 + S_{12})}}(\phi_1 + \phi_2) \quad (4.1.15)$$

$$\psi_2 = \frac{1}{\sqrt{2(1 - S_{12})}}(\phi_1 - \phi_2) \quad (4.1.16)$$

we get

$$|\psi_1\bar{\psi}_1\rangle = \frac{1}{2(1+S_{12})}(|\phi_1\bar{\phi}_1\rangle + |\phi_1\bar{\phi}_2\rangle + |\phi_2\bar{\phi}_1\rangle + |\phi_2\bar{\phi}_2\rangle) \quad (4.1.17)$$

$$|\psi_2\bar{\psi}_2\rangle = \frac{1}{2(1-S_{12})}(|\phi_1\bar{\phi}_1\rangle - |\phi_1\bar{\phi}_2\rangle - |\phi_2\bar{\phi}_1\rangle + |\phi_2\bar{\phi}_2\rangle) \quad (4.1.18)$$

As  $R \rightarrow \infty$ ,  $S_{12} \rightarrow 0$ , thus

$$|\Phi_0\rangle = |\psi_1\bar{\psi}_1\rangle - |\psi_2\bar{\psi}_2\rangle = |\phi_1\bar{\phi}_2\rangle + |\phi_2\bar{\phi}_1\rangle \quad (4.1.19)$$

Renormalize it, we get

$$|\Phi_0\rangle = \frac{1}{\sqrt{2}}(|\phi_1\bar{\phi}_2\rangle + |\phi_2\bar{\phi}_1\rangle) \quad (4.1.20)$$

## 4.2 Doubly Exited CI

## 4.3 Some Illustrative Calculations

## 4.4 Natural Orbitals and the 1-Particle Reduced DM

**Ex 4.4**

$$\gamma_{ij} = \int d\mathbf{x}_1 d\mathbf{x}'_1 \chi_i^*(\mathbf{x}_1) \gamma(\mathbf{x}_1, \mathbf{x}'_1) \chi_j(\mathbf{x}'_1) \quad (4.4.1)$$

$$\begin{aligned} \gamma_{ji}^* &= \int d\mathbf{x}_1 d\mathbf{x}'_1 \chi_j(\mathbf{x}_1) \gamma^*(\mathbf{x}_1, \mathbf{x}'_1) \chi_i^*(\mathbf{x}'_1) \\ &= \int d\mathbf{x}'_1 d\mathbf{x}_1 \chi_j(\mathbf{x}'_1) \gamma^*(\mathbf{x}'_1, \mathbf{x}_1) \chi_i^*(\mathbf{x}_1) \\ &= \int d\mathbf{x}'_1 d\mathbf{x}_1 \chi_j(\mathbf{x}'_1) \gamma(\mathbf{x}_1, \mathbf{x}'_1) \chi_i^*(\mathbf{x}_1) \\ &= \gamma_{ij} \end{aligned} \quad (4.4.2)$$

$\therefore \gamma$  is Hermitian.

**Ex 4.5**

$$\begin{aligned} \langle \Phi | \Phi \rangle &= \frac{1}{N} \int d\mathbf{x}_1 \gamma(\mathbf{x}_1, \mathbf{x}_1) \\ &= \frac{1}{N} \int d\mathbf{x}_1 \sum_{ij} \chi_i(\mathbf{x}_1) \gamma_{ij} \chi_j^*(\mathbf{x}_1) \\ &= \frac{1}{N} \sum_{ij} \left[ \int d\mathbf{x}_1 \chi_j^*(\mathbf{x}_1) \chi_i(\mathbf{x}_1) \right] \gamma_{ij} \\ &= \frac{1}{N} \sum_{ij} \delta_{ji} \gamma_{ij} \\ &= \frac{1}{N} \text{tr } \gamma \end{aligned} \quad (4.4.3)$$

thus

$$\text{tr } \gamma = N \quad (4.4.4)$$

**Ex 4.6**

a.

$$\begin{aligned}
\langle \Phi | \mathcal{O}_1 | \Phi \rangle &= \sum_i \langle \Phi | h(\mathbf{x}_1) | \Phi \rangle \\
&= N \int d\mathbf{x}_1 \int d\mathbf{x}_2 \cdots d\mathbf{x}_N \Phi^*(\mathbf{x}_1, \dots, \mathbf{x}_N) h(\mathbf{x}_1) \Phi(\mathbf{x}_1, \dots, \mathbf{x}_N) \\
&= N \frac{1}{N} \int d\mathbf{x}_1 [h(\mathbf{x}_1) \gamma(\mathbf{x}_1, \mathbf{x}'_1)]_{\mathbf{x}'_1 = \mathbf{x}_1} \\
&= \int d\mathbf{x}_1 [h(\mathbf{x}_1) \gamma(\mathbf{x}_1, \mathbf{x}'_1)]_{\mathbf{x}'_1 = \mathbf{x}_1}
\end{aligned} \tag{4.4.5}$$

b.

$$\begin{aligned}
\langle \Phi | \mathcal{O}_1 | \Phi \rangle &= \int d\mathbf{x}_1 [h(\mathbf{x}_1) \gamma(\mathbf{x}_1, \mathbf{x}'_1)]_{\mathbf{x}'_1 = \mathbf{x}_1} \\
&= \int d\mathbf{x}_1 [h(\mathbf{x}_1) \sum_{ij} \chi_i(\mathbf{x}_1) \gamma_{ij} \chi_j^*(\mathbf{x}'_1)]_{\mathbf{x}'_1 = \mathbf{x}_1} \\
&= \sum_{ij} \left[ \int d\mathbf{x}_1 \chi_j^*(\mathbf{x}_1) h(\mathbf{x}_1) \chi_i(\mathbf{x}_1) \right] \gamma_{ij} \\
&= \sum_{ij} h_{ji} \gamma_{ij} \\
&= \sum_j (\mathbf{h}\gamma)_{jj} \\
&= \text{tr}(\mathbf{h}\gamma)
\end{aligned} \tag{4.4.6}$$

#### Ex 4.7

a.

$$\langle \Phi | \mathcal{O}_1 | \Phi \rangle = \sum_{ij} \langle i | h | j \rangle \langle \Phi | a_i^+ a_j | \Phi \rangle \tag{4.4.7}$$

while

$$\langle \Phi | \mathcal{O}_1 | \Phi \rangle = \sum_{ij} h_{ij} \gamma_{ji} \tag{4.4.8}$$

$\therefore$

$$\gamma_{ji} = \langle \Phi | a_i^+ a_j | \Phi \rangle \tag{4.4.9}$$

i.e.

$$\gamma_{ij} = \langle \Phi | a_j^+ a_i | \Phi \rangle \tag{4.4.10}$$

b.

$$\gamma_{ij}^{\text{HF}} = \langle \Psi_0 | a_j^+ a_i | \Psi_0 \rangle \tag{4.4.11}$$

If  $i$  is unoccupied, thus  $\gamma_{ij}^{\text{HF}} = 0$  as we cannot annihilate electrons from it. If  $j$  is unoccupied,  $\gamma_{ij}^{\text{HF}} = \delta_{ij} - \langle \Psi_0 | a_i a_j^+ | \Psi_0 \rangle = \delta_{ij} - \delta_{ij} = 0$ .

Otherwise, when  $i, j$  are occupied, it's clear that  $\gamma_{ij}^{\text{HF}} = \delta_{ij}$ .

Thus,

$$\gamma_{ij}^{\text{HF}} = \begin{cases} \delta_{ij} & i, j \text{ are occupied} \\ 0 & \text{otherwise} \end{cases} \tag{4.4.12}$$

#### Ex 4.8

a. Since

$$|^1\Phi_0\rangle = c_0 |\psi_1 \bar{\psi}_1\rangle + \sum_{r=2}^K c_1^r \frac{1}{\sqrt{2}} (|\psi_1 \bar{\psi}_r\rangle + |\psi_r \bar{\psi}_1\rangle) + \frac{1}{2} \sum_{r=2}^K \sum_{s=2}^K c_{11}^{rs} \frac{1}{\sqrt{2}} (|\psi_r \bar{\psi}_s\rangle + |\psi_s \bar{\psi}_r\rangle) \quad (4.4.13)$$

we can write

$$|^1\Phi_0\rangle = \sum_i^K \sum_j^K C_{ij} |\psi_i \bar{\psi}_j\rangle \quad (4.4.14)$$

When one or two of  $i, j$  equals 1, it is clear that  $C_{ij} = C_{ji}$ . Otherwise,  $c_{11}^{rs} = c_{11}^{sr}$ . Thus,  $\mathbf{C}$  is symmetric.

b.

$$\begin{aligned} \gamma(\mathbf{x}_1, \mathbf{x}'_1) &= 2 \int d\mathbf{x}_2 \sum_{ij} C_{ij} \frac{1}{\sqrt{2}} (\psi_i(\mathbf{x}_1) \bar{\psi}_j(\mathbf{x}_2) - \psi_i(\mathbf{x}_2) \bar{\psi}_j(\mathbf{x}_1)) \sum_{kl} C_{kl}^* \frac{1}{\sqrt{2}} (\psi_k^*(\mathbf{x}'_1) \bar{\psi}_l^*(\mathbf{x}_2) - \psi_k^*(\mathbf{x}_2) \bar{\psi}_l^*(\mathbf{x}'_1)) \\ &= \sum_{ij} \sum_{kl} C_{ij} C_{kl}^* \int d\mathbf{x}_2 (\psi_i(\mathbf{x}_1) \bar{\psi}_j(\mathbf{x}_2) - \psi_i(\mathbf{x}_2) \bar{\psi}_j(\mathbf{x}_1)) (\psi_k^*(\mathbf{x}'_1) \bar{\psi}_l^*(\mathbf{x}_2) - \psi_k^*(\mathbf{x}_2) \bar{\psi}_l^*(\mathbf{x}'_1)) \\ &= \sum_{ij} \sum_{kl} C_{ij} C_{kl}^* [\psi_i(\mathbf{x}_1) \psi_k^*(\mathbf{x}'_1) \delta_{jl} + \bar{\psi}_j(\mathbf{x}_1) \bar{\psi}_l^*(\mathbf{x}'_1) \delta_{ik}] \\ &= \sum_{ij} \sum_k C_{ij} C_{kj}^* \psi_i(\mathbf{x}_1) \psi_k^*(\mathbf{x}'_1) + \sum_{ij} \sum_l C_{ij} C_{il}^* \bar{\psi}_j(\mathbf{x}_1) \bar{\psi}_l^*(\mathbf{x}'_1) \\ &= \sum_{ik} (\mathbf{C} \mathbf{C}^\dagger)_{ik} \psi_i(\mathbf{x}_1) \psi_k^*(\mathbf{x}'_1) + \sum_{jl} (\mathbf{C}^\dagger \mathbf{C})_{jl} \bar{\psi}_j(\mathbf{x}_1) \bar{\psi}_l^*(\mathbf{x}'_1) \\ &= \sum_{ij} (\mathbf{C} \mathbf{C}^\dagger)_{ij} \psi_i(\mathbf{x}_1) \psi_j^*(\mathbf{x}'_1) + \sum_{ij} (\mathbf{C} \mathbf{C}^\dagger)_{ji} \bar{\psi}_i(\mathbf{x}_1) \bar{\psi}_j^*(\mathbf{x}'_1) \\ &= \sum_{ij} (\mathbf{C} \mathbf{C}^\dagger)_{ij} [\psi_i(1) \psi_j^*(1') + \bar{\psi}_i(1) \bar{\psi}_j^*(1')] \end{aligned} \quad (4.4.15)$$

c.

$$\mathbf{d} = \mathbf{U}^\dagger \mathbf{C} \mathbf{U} \quad (4.4.16)$$

$$\mathbf{d}^\dagger = (\mathbf{U}^\dagger \mathbf{C} \mathbf{U})^\dagger = \mathbf{U}^\dagger \mathbf{C}^\dagger \mathbf{U} \quad (4.4.17)$$

Since  $\mathbf{U}$  is unitary

$$\mathbf{d}^2 = \mathbf{d} \mathbf{d}^\dagger = \mathbf{U}^\dagger \mathbf{C} \mathbf{U} \mathbf{U}^\dagger \mathbf{C}^\dagger \mathbf{U} = \mathbf{U}^\dagger \mathbf{C} \mathbf{C}^\dagger \mathbf{U} \quad (4.4.18)$$

d. Since

$$\psi_k = \sum_i U_{ik}^\dagger \zeta_i \quad (4.4.19)$$

$$\begin{aligned} \gamma(\mathbf{x}_1, \mathbf{x}'_1) &= \sum_{ij} (\mathbf{C} \mathbf{C}^\dagger)_{ij} [\psi_i(1) \psi_j^*(1') + \bar{\psi}_i(1) \bar{\psi}_j^*(1')] \\ &= \sum_{ij} (\mathbf{C} \mathbf{C}^\dagger)_{ij} \left[ \sum_k U_{ki}^\dagger \zeta_k(1) \sum_l U_{lj}^{\dagger*} \zeta_l^*(1') + \sum_k U_{ki}^\dagger \bar{\zeta}_k(1) \sum_l U_{lj}^{\dagger*} \bar{\zeta}_l^*(1') \right] \\ &= \sum_k \sum_l \sum_{ij} U_{ki}^\dagger (\mathbf{C} \mathbf{C}^\dagger)_{ij} U_{jl} [\zeta_k(1) \zeta_l^*(1') + \bar{\zeta}_k(1) \bar{\zeta}_l^*(1')] \\ &= \sum_k \sum_l (\mathbf{U}^\dagger \mathbf{C} \mathbf{C}^\dagger \mathbf{U})_{kl} [\zeta_k(1) \zeta_l^*(1') + \bar{\zeta}_k(1) \bar{\zeta}_l^*(1')] \\ &= \sum_k \sum_l d_k^2 \delta_{kl} [\zeta_k(1) \zeta_l^*(1') + \bar{\zeta}_k(1) \bar{\zeta}_l^*(1')] \\ &= \sum_k d_k^2 [\zeta_k(1) \zeta_k^*(1') + \bar{\zeta}_k(1) \bar{\zeta}_k^*(1')] \end{aligned} \quad (4.4.20)$$

e.

$$\begin{aligned}
|{}^1\Phi_0\rangle &= \sum_i^K \sum_j^K C_{ij} |\psi_i \bar{\psi}_j\rangle \\
&= \sum_i^K \sum_j^K C_{ij} \left| \left( \sum_k U_{ki}^\dagger \zeta_k \right) \left( \sum_l U_{lj}^\dagger \bar{\zeta}_l \right) \right\rangle \\
&= \sum_i^K \sum_j^K \sum_k \sum_l U_{ki}^\dagger C_{ij} U_{jl} |\zeta_k \bar{\zeta}_l\rangle \\
&= \sum_k \sum_l d_k \delta_{kl} |\zeta_k \bar{\zeta}_l\rangle \\
&= \sum_k d_k |\zeta_k \bar{\zeta}_k\rangle
\end{aligned} \tag{4.4.21}$$

## 4.5 The MCSCF and the GVB Methods

### Ex 4.9

a.

$$\begin{aligned}
\langle u | u \rangle &= \frac{1}{a^2 + b^2} \langle a\psi_A + b\psi_B | a\psi_A + b\psi_B \rangle \\
&= \frac{1}{a^2 + b^2} (a^2 + b^2) \\
&= 1
\end{aligned} \tag{4.5.1}$$

$$\begin{aligned}
\langle v | v \rangle &= \frac{1}{a^2 + b^2} \langle a\psi_A - b\psi_B | a\psi_A - b\psi_B \rangle \\
&= \frac{1}{a^2 + b^2} (a^2 + b^2) \\
&= 1
\end{aligned} \tag{4.5.2}$$

$$\begin{aligned}
\langle u | v \rangle &= \frac{1}{a^2 + b^2} \langle a\psi_A + b\psi_B | a\psi_A - b\psi_B \rangle \\
&= \frac{a^2 - b^2}{a^2 + b^2}
\end{aligned} \tag{4.5.3}$$

b.

$$\begin{aligned}
|\Psi_{\text{GVB}}\rangle &= [2(1 + S^2)]^{-1/2} [u(1)v(2) + u(2)v(1)] 2^{-1/2} [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&= \left[ 2 + 2 \left( \frac{a^2 - b^2}{a^2 + b^2} \right)^2 \right]^{-1/2} (a^2 + b^2)^{-1} \\
&\quad \times [(a\psi_A(1) + b\psi_B(1))(a\psi_A(2) - b\psi_B(2)) + (a\psi_A(2) + b\psi_B(2))(a\psi_A(1) - b\psi_B(1))] \\
&\quad \times 2^{-1/2} [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&= \left[ 2(a^2 + b^2)^2 + 2(a^2 - b^2)^2 \right]^{-1/2} [2a^2\psi_A(1)\psi_A(2) - 2b^2\psi_B(1)\psi_B(2)] \times 2^{-1/2} [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&= [4(a^4 + b^4)]^{-1/2} [2a^2\psi_A(1)\psi_A(2) - 2b^2\psi_B(1)\psi_B(2)] \times 2^{-1/2} [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&= (a^4 + b^4)^{-1/2} [a^2\psi_A(1)\psi_A(2) - b^2\psi_B(1)\psi_B(2)] \times 2^{-1/2} [\alpha(1)\beta(2) - \alpha(2)\beta(1)]
\end{aligned} \tag{4.5.4}$$

i.e.

$$\begin{aligned}
|\Psi_{\text{GVB}}\rangle &= (a^4 + b^4)^{-1/2} a^2 \times 2^{-1/2} \psi_A(1)\psi_A(2) [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&\quad - (a^4 + b^4)^{-1/2} b^2 \times 2^{-1/2} \psi_B(1)\psi_B(2) [\alpha(1)\beta(2) - \alpha(2)\beta(1)] \\
&= (a^4 + b^4)^{-1/2} a^2 |\psi_A \bar{\psi}_A\rangle - (a^4 + b^4)^{-1/2} b^2 |\psi_B \bar{\psi}_B\rangle
\end{aligned} \tag{4.5.5}$$

thus  $|\Psi_{\text{GVB}}\rangle$  is identical to  $|\Psi^{\text{MCSCF}}\rangle$ .

## 4.6 Truncated CI and the Size-consistency Problem

### Ex 4.10

$$\begin{aligned}
\langle \Psi_0 | \mathcal{H} | 1_1 \bar{1}_1 2_1 \bar{2}_1 \rangle &= \langle 1_2 \bar{1}_2 | 2_1 \bar{2}_1 \rangle \\
&= \langle 1_2 \bar{1}_2 | 2_1 \bar{2}_1 \rangle - \langle 1_2 \bar{1}_2 | \bar{2}_1 2_1 \rangle \\
&= [1_2 2_1 | \bar{1}_2 \bar{2}_1] - [1_2 \bar{2}_1 | \bar{1}_2 2_1] \\
&= (1_2 2_1 | 1_2 2_1) \\
&= 0
\end{aligned} \tag{4.6.1}$$

$$\begin{aligned}
\langle 2_1 \bar{2}_1 1_2 \bar{1}_2 | \mathcal{H} | 1_1 \bar{1}_1 2_1 \bar{2}_1 \rangle &= \langle 2_1 \bar{2}_1 1_2 \bar{1}_2 | \mathcal{H} | 2_1 \bar{2}_1 1_1 \bar{1}_1 \rangle \\
&= \langle 1_2 \bar{1}_2 | 1_1 \bar{1}_1 \rangle \\
&= \langle 1_2 \bar{1}_2 | 1_1 \bar{1}_1 \rangle - \langle 1_2 \bar{1}_2 | \bar{1}_1 1_1 \rangle \\
&= [1_2 1_1 | \bar{1}_2 \bar{1}_1] - [1_2 \bar{1}_1 | \bar{1}_2 1_1] \\
&= (1_2 1_1 | 1_2 1_1) \\
&= 0
\end{aligned} \tag{4.6.2}$$

$$\begin{aligned}
\langle 1_1 \bar{1}_1 2_2 \bar{2}_2 | \mathcal{H} | 1_1 \bar{1}_1 2_1 \bar{2}_1 \rangle &= \langle 2_2 \bar{2}_2 | 2_1 \bar{2}_1 \rangle \\
&= \langle 2_2 \bar{2}_2 | 2_1 \bar{2}_1 \rangle - \langle 2_2 \bar{2}_2 | \bar{2}_1 2_1 \rangle \\
&= [2_2 2_1 | \bar{2}_2 \bar{2}_1] - [2_2 \bar{2}_1 | \bar{2}_2 2_1] \\
&= (2_2 2_1 | 2_2 2_1) \\
&= 0
\end{aligned} \tag{4.6.3}$$

### Ex 4.11

$$\frac{{}^N E_{\text{corr}}(\text{DCI})}{N} = \frac{\Delta - (\Delta^2 + N K_{12}^2)^{1/2}}{N} \tag{4.6.4}$$

From Ex 4.3, we get  $\Delta = 0.78865$ ,  $K_{12} = 0.1813$ , thus

$N$	${}^N E_{\text{corr}}(\text{DCI})/N$
1	-0.02057
10	-0.01864
100	-0.01188

### Ex 4.12

**a.** In addition to the matrix elements obtained in Eq. 4.56 in the textbook, we need to calculate the rest, i.e. those involving  $|2_1 \bar{2}_1 2_2 \bar{2}_2\rangle$ .

$$\langle \Psi_0 | \mathcal{H} | 2_1 \bar{2}_1 2_2 \bar{2}_2 \rangle = 0 \tag{4.6.5}$$

$$\begin{aligned}
\langle 2_1 \bar{2}_1 1_2 \bar{1}_2 | \mathcal{H} | 2_1 \bar{2}_1 2_2 \bar{2}_2 \rangle &= \langle 1_2 \bar{1}_2 | 2_2 \bar{2}_2 \rangle \\
&= \langle 1_2 \bar{1}_2 | 2_2 \bar{2}_2 \rangle - \langle 1_2 \bar{1}_2 | \bar{2}_2 2_2 \rangle \\
&= [1_2 2_2 | \bar{1}_2 \bar{2}_2] - [1_2 \bar{2}_2 | \bar{1}_2 2_2] \\
&= (1_2 | 1_2) \\
&= K_{12}
\end{aligned} \tag{4.6.6}$$

$$\begin{aligned}
\langle 1_1 \bar{1}_1 2_2 \bar{2}_2 | \mathcal{H} | 2_1 \bar{2}_1 2_2 \bar{2}_2 \rangle &= \langle 1_1 \bar{1}_1 | 2_1 \bar{2}_1 \rangle \\
&= \langle 1_1 \bar{1}_1 | 2_1 \bar{2}_1 \rangle - \langle 1_1 \bar{1}_1 | \bar{2}_1 2_1 \rangle \\
&= [1_1 2_1 | \bar{1}_1 \bar{2}_1] - [1_1 \bar{2}_1 | \bar{1}_1 2_1] \\
&= (1_1 | 1_1) \\
&= K_{12}
\end{aligned} \tag{4.6.7}$$

$$\begin{aligned}\langle 2_1 \bar{2}_1 2_2 \bar{2}_2 | \mathcal{H} - E_0 | 2_1 \bar{2}_1 2_2 \bar{2}_2 \rangle &= 4h_{22} + 2J_{22} - 4h_{11} - 2J_{11} \\ &= 4\Delta\end{aligned}\quad (4.6.8)$$

thus the full CI equation is

$$\begin{pmatrix} 0 & K_{12} & K_{12} & 0 \\ K_{12} & 2\Delta & 0 & K_{12} \\ K_{12} & 0 & 2\Delta & K_{12} \\ 0 & K_{12} & K_{12} & 4\Delta \end{pmatrix} \begin{pmatrix} 1 \\ c_1 \\ c_2 \\ c_3 \end{pmatrix} = {}^2E_{\text{corr}} \begin{pmatrix} 1 \\ c_1 \\ c_2 \\ c_3 \end{pmatrix}\quad (4.6.9)$$

e. Directly solve the full CI equation (see **4-11, 12.nb**), we get the lowest eigenvalue

$${}^2E_{\text{corr}} = 2[\Delta - \sqrt{\Delta^2 + K_{12}^2}] \quad (4.6.10)$$

**Ex 4.13**

$$\begin{aligned}{}^1E_{\text{corr}}(\text{exact}) &= \Delta - \sqrt{\Delta^2 + K_{12}^2} \\ &= \Delta - \Delta \sqrt{1 + \frac{K_{12}^2}{\Delta^2}} \\ &\approx \Delta - \Delta \left( 1 + \frac{1}{2} \frac{K_{12}^2}{\Delta^2} \right) \\ &\approx -\frac{1}{2} \frac{K_{12}^2}{\Delta}\end{aligned}\quad (4.6.11)$$

$$\begin{aligned}{}^N E_{\text{corr}}(\text{DCI}) &= \Delta - \sqrt{\Delta^2 + N K_{12}^2} \\ &= \Delta - \Delta \sqrt{1 + \frac{N K_{12}^2}{\Delta^2}} \\ &\approx \Delta - \Delta \left( 1 + \frac{1}{2} \frac{N K_{12}^2}{\Delta^2} \right) \\ &\approx -\frac{1}{2} \frac{N K_{12}^2}{\Delta}\end{aligned}\quad (4.6.12)$$

**Ex 4.14**

a.

$$\begin{aligned}{}^N E_{\text{corr}}(\text{DCI}) &= \Delta - \sqrt{\Delta^2 + N K_{12}^2} \\ &= \Delta - \Delta \sqrt{1 + \frac{N K_{12}^2}{\Delta^2}} \\ &= \Delta - \Delta \left( 1 + \frac{1}{2} \frac{N K_{12}^2}{\Delta^2} - \frac{1}{8} \frac{N^2 K_{12}^4}{\Delta^4} + \dots \right) \\ &= -\frac{1}{2} \frac{N K_{12}^2}{\Delta} + \frac{1}{8} \frac{N^2 K_{12}^4}{\Delta^3} + \dots\end{aligned}\quad (4.6.13)$$

b.

$$c_0^2 = \frac{1}{1 + N c_1^2} \quad (4.6.14)$$

thus

$$1 - c_0^2 = \frac{N c_1^2}{1 + N c_1^2} \quad (4.6.15)$$

c.

$$\begin{aligned}
c_1 &= \frac{K_{12}}{^N E_{\text{corr}}(\text{DCI}) - 2\Delta} \\
&= \frac{K_{12}}{-\frac{1}{2} \frac{N K_{12}^2}{\Delta} + \frac{1}{8} \frac{N^2 K_{12}^4}{\Delta^3} - 2\Delta + \dots} \\
&= \frac{1}{-\frac{1}{2} \frac{N K_{12}}{\Delta} + \frac{1}{8} \frac{N^2 K_{12}^3}{\Delta^3} - 2 \frac{\Delta}{K_{12}} + \dots} \\
&= -\frac{1}{2} \frac{K_{12}}{\Delta} + \dots
\end{aligned} \tag{4.6.16}$$

d.

$$\Delta E_{\text{Davidson}} = (1 - c_0^2) ^N E_{\text{corr}}(\text{DCI}) \tag{4.6.17}$$

$$\begin{aligned}
&= \frac{N(-K_{12}/2\Delta)^2}{1 + N(-K_{12}/2\Delta)^2} \left( -\frac{1}{2} \frac{N K_{12}^2}{\Delta} + \frac{1}{8} \frac{N^2 K_{12}^4}{\Delta^3} + \dots \right) \\
&= N \frac{K_{12}^2}{4\Delta^2} \left( -\frac{1}{2} \frac{N K_{12}^2}{\Delta} + \frac{1}{8} \frac{N^2 K_{12}^4}{\Delta^3} + \dots \right) \\
&= -\frac{N^2 K_{12}^4}{8\Delta^3} + \dots
\end{aligned} \tag{4.6.18}$$

e.

$$\begin{aligned}
\Delta E_{\text{Davidson}} &= (1 - c_0^2) ^N E_{\text{corr}}(\text{DCI}) \\
&= \frac{N c_1^2}{1 + N c_1^2} N K_{12} c_1 \\
&= \frac{N^2 K_{12} c_1^3}{1 + N c_1^2}
\end{aligned} \tag{4.6.19}$$

while

$$c_1 = ^N E_{\text{corr}}(\text{DCI}) / N K_{12} \tag{4.6.20}$$

thus

$$\begin{aligned}
\Delta E_{\text{Davidson}} &= \frac{N^2 K_{12} c_1^3}{1 + N c_1^2} \\
&= \frac{[^N E_{\text{corr}}(\text{DCI})]^3 / N K_{12}^2}{1 + [^N E_{\text{corr}}(\text{DCI})]^2 / N K_{12}^2} \\
&= \frac{[^N E_{\text{corr}}(\text{DCI})]^3}{N K_{12}^2 + [^N E_{\text{corr}}(\text{DCI})]^2}
\end{aligned} \tag{4.6.21}$$

Since

$$^N E_{\text{corr}}(\text{DCI}) = \Delta - \sqrt{\Delta^2 + N K_{12}^2} \tag{4.6.22}$$

$$^N E_{\text{corr}}(\text{exact}) = N \left[ \Delta - \sqrt{\Delta^2 + K_{12}^2} \right] \tag{4.6.23}$$

The values of  ${}^N E_{\text{corr}}(\text{DCI})$ ,  ${}^N E_{\text{corr}}(\text{exact})$ ,  $\Delta E_{\text{Davidson}}$  for  $N = 1, \dots, 20, 100$  are as follows.

$N$	${}^N E_{\text{corr}}(\text{DCI})$	${}^N E_{\text{corr}}(\text{exact})$	$\Delta E_{\text{Davidson}}$

f. From data of Saxe et al., we get

$$E_{\text{corr}}(\text{DCI}) = -0.139340 \quad c_0 = 0.97938 \quad (4.6.24)$$

thus

$$\begin{aligned} \Delta E_{\text{Davidson}} &= (1 - c_0^2)E_{\text{corr}}(\text{DCI}) \\ &= (1 - 0.97938^2) \times (-76.129178) \\ &= -0.005687 \end{aligned} \quad (4.6.25)$$

thus

	correlation energy	error wrt full CI
DCI + Davidson	-0.145027	0.003181
DQCI	-0.145859	0.002349
Full CI	-0.148208	0

**Ex 4.15**

$$\begin{aligned} \langle \Psi_0 | \Phi_0 \rangle &= \prod_{i=1}^N \left[ (1 + c^2)^{-1/2} \langle 1_i \bar{1}_i | 1_i \bar{1}_i \rangle + c(1 + c^2)^{-1/2} \langle 1_i \bar{1}_i | 2_i \bar{2}_i \rangle \right] \\ &= (1 + c^2)^{-N/2} \end{aligned} \quad (4.6.26)$$

Since

$$c = \frac{{}^1E_{\text{corr}}}{K_{12}} = \frac{-0.020571}{0.1813} = -0.1135 \quad (4.6.27)$$

we get

$N$	$\langle \Psi_0   \Phi_0 \rangle$
1	0.9936
10	0.9380
100	0.5273
