2 Many-electron Wave Functions and Operators

2.1 The Electronic Problem

2.1.1 Atomic Units

2.1.2 The B-O Approximation

2.1.3 The Antisymmetry or Pauli Exclusion Principle

2.2 Orbitals, Slater Determinants, and Basis Functions

2.2.1 Spin Orbitals and Spatial Orbitals

Ex 2.1 Consider $\langle \chi_k \,|\, \chi_m \rangle$. If $k = m$,

$$\langle \chi_{2i-1} \,|\, \chi_{2i-1} \rangle = \langle \psi_i^\alpha \,|\, \psi_i^\alpha \rangle \langle \alpha \,|\, \alpha \rangle = 1 \tag{2.2.1}$$

$$\langle \chi_{2i} \,|\, \chi_{2i} \rangle = \left\langle \psi_i^\beta \,\middle|\, \psi_i^\beta \right\rangle \langle \alpha \,|\, \alpha \rangle = 1 \tag{2.2.2}$$

thus

$$\langle \chi_k \,|\, \chi_k \rangle = 1 \tag{2.2.3}$$

If $k \neq m$, three cases may occur as below

$$\langle \chi_{2i-1} \,|\, \chi_{2j-1} \rangle = \langle \psi_i^\alpha \,|\, \psi_j^\alpha \rangle \langle \alpha \,|\, \alpha \rangle = 0 \cdot 1 = 0 \qquad (i \neq j) \tag{2.2.4}$$

$$\langle \chi_{2i-1} \,|\, \chi_{2j} \rangle = \left\langle \psi_i^\alpha \,\middle|\, \psi_j^\beta \right\rangle \langle \alpha \,|\, \beta \rangle = S_{ij} \cdot 0 = 0 \tag{2.2.5}$$

$$\langle \chi_{2i} \,|\, \chi_{2j} \rangle = \left\langle \psi_i^\beta \,\middle|\, \psi_j^\beta \right\rangle \langle \beta \,|\, \beta \rangle = 0 \cdot 1 = 0 \qquad (i \neq j) \tag{2.2.6}$$

thus

$$\langle \chi_k \,|\, \chi_m \rangle = 0 \qquad (k \neq m) \tag{2.2.7}$$

Overall,

$$\langle \chi_k \,|\, \chi_m \rangle = \delta_{km} \tag{2.2.8}$$

2.2.2 Hartree Products

Ex 2.2

$$
\begin{aligned}
\mathscr{H} \Psi^{HP} &= \sum_{i=1}^{N} h(i) \chi_i(\mathbf{x}_1) \chi_j(\mathbf{x}_2) \cdots \chi_k(\mathbf{x}_N) \\
&= \varepsilon_i \chi_i(\mathbf{x}_1) \chi_j(\mathbf{x}_2) \cdots \chi_k(\mathbf{x}_N) + \chi_i(\mathbf{x}_1)[\varepsilon_j \chi_j(\mathbf{x}_2)] \cdots \chi_k(\mathbf{x}_N) + \cdots + \chi_i(\mathbf{x}_1) \chi_j(\mathbf{x}_2) \cdots [\varepsilon_k \chi_k(\mathbf{x}_N)] \\
&= (\varepsilon_i + \varepsilon_j + \cdots + \varepsilon_k) \Psi^{HP}
\end{aligned}
\tag{2.2.9}
$$

2.2.3 Slater Determinants

Ex 2.3

$$
\begin{aligned}
\langle \Psi \,|\, \Psi \rangle &= \frac{1}{2}(\langle \chi_i \,|\, \chi_i \rangle \langle \chi_j \,|\, \chi_j \rangle - \langle \chi_i \,|\, \chi_j \rangle \langle \chi_j \,|\, \chi_i \rangle - \langle \chi_j \,|\, \chi_i \rangle \langle \chi_i \,|\, \chi_j \rangle + \langle \chi_j \,|\, \chi_j \rangle \langle \chi_i \,|\, \chi_i \rangle) \\
&= \frac{1}{2}(1 + 0 + 0 + 1) = 1
\end{aligned}
\tag{2.2.10}
$$

Ex 2.4 According to Ex. 2.2, we know that $\chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2)$ are an eigenfunction of $\mathscr{H}$ and has the eigenvalue $\varepsilon_i \varepsilon_j$. Similarly, we have the same conclusion for $\chi_i(\mathbf{x}_2)\chi_j(\mathbf{x}_1)$.
For the antisymmetrized wave function,

$$
\begin{aligned}
\langle \Psi \,|\, \mathscr{H} \,|\, \Psi \rangle &= \frac{1}{2} \left(\langle \chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2) \,|\, \mathscr{H} \,|\, \chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2) \rangle - \langle \chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2) \,|\, \mathscr{H} \,|\, \chi_j(\mathbf{x}_1)\chi_i(\mathbf{x}_2) \rangle \right. \\
&\qquad \left. - \langle \chi_j(\mathbf{x}_1)\chi_i(\mathbf{x}_2) \,|\, \mathscr{H} \,|\, \chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2) \rangle + \langle \chi_j(\mathbf{x}_1)\chi_i(\mathbf{x}_2) \,|\, \mathscr{H} \,|\, \chi_j(\mathbf{x}_1)\chi_i(\mathbf{x}_2) \rangle \right) \\
&= \frac{1}{2}(\varepsilon_i + \varepsilon_j - 0 - 0 + \varepsilon_i + \varepsilon_j) \\
&= \varepsilon_i + \varepsilon_j
\end{aligned}
\tag{2.2.11}
$$

Ex 2.5

$$\langle K \,|\, L \rangle = \frac{1}{2} \langle \chi_i(\mathbf{x}_1)\chi_j(\mathbf{x}_2) - \chi_j(\mathbf{x}_1)\chi_i(\mathbf{x}_2) \,|\, \chi_k(\mathbf{x}_1)\chi_l(\mathbf{x}_2) - \chi_l(\mathbf{x}_1)\chi_k(\mathbf{x}_2) \rangle$$

$$= \frac{1}{2}(\langle \chi_i \,|\, \chi_k \rangle \langle \chi_j \,|\, \chi_l \rangle - \langle \chi_i \,|\, \chi_l \rangle \langle \chi_j \,|\, \chi_k \rangle - \langle \chi_j \,|\, \chi_k \rangle \langle \chi_i \,|\, \chi_l \rangle + \langle \chi_j \,|\, \chi_l \rangle \langle \chi_i \,|\, \chi_k \rangle)$$

$$= \frac{1}{2}(\delta_{ik}\delta_{jl} - \delta_{il}\delta_{jk} - \delta_{jk}\delta_{il} + \delta_{jl}\delta_{ik}) \tag{2.2.12}$$

$$= \delta_{ik}\delta_{jl} - \delta_{il}\delta_{jk}$$

2.2.4   The Hartree-Fock Approximation

2.2.5   The Minimal Basis H_2 Model

Ex 2.6

$$\langle \psi_1 \,|\, \psi_1 \rangle = \frac{1}{2(1 + S_{12})}(\langle \phi_1 \,|\, \phi_1 \rangle + 2\langle \phi_1 \,|\, \phi_2 \rangle + \langle \phi_2 \,|\, \phi_2 \rangle) = \frac{2 + 2S_{12}}{2(1 + S_{12})} = 1 \tag{2.2.13}$$

$$\langle \psi_2 \,|\, \psi_2 \rangle = \frac{1}{2(1 - S_{12})}(\langle \phi_1 \,|\, \phi_1 \rangle - 2\langle \phi_1 \,|\, \phi_2 \rangle + \langle \phi_2 \,|\, \phi_2 \rangle) = \frac{2 - 2S_{12}}{2(1 - S_{12})} = 1 \tag{2.2.14}$$

$$\langle \psi_1 \,|\, \psi_2 \rangle = \frac{1}{2\sqrt{1 + S_{12}}\sqrt{1 - S_{12}}}(\langle \phi_1 \,|\, \phi_1 \rangle - \langle \phi_2 \,|\, \phi_2 \rangle) = 0 \tag{2.2.15}$$

2.2.6   Excited Determinants

2.2.7   Form of the Exact Wfn and CI

Ex 2.7   Size of full CI matrix

$$C_{72}^{42} = 164307576757973059488 \approx 1.64 \times 10^{20} \tag{2.2.16}$$

The number of singly excited determinants

$$42 \times 30 = 1260 \tag{2.2.17}$$

The number of doubly excited determinants

$$C_{42}^2 C_{30}^2 = 374535 \tag{2.2.18}$$

2.3   Operators and Matrix Elements

2.3.1   Minimal Basis H_2 Matrix Elements

Ex 2.8

$$\langle \Psi_{12}^{34} \,|\, h(1) \,|\, \Psi_{12}^{34} \rangle = \frac{1}{2} \langle \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \,|\, h(1) \,|\, \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \rangle$$

$$= \frac{1}{2}(\langle \chi_3 \,|\, h(1) \,|\, \chi_3 \rangle - 0 - 0 + \langle \chi_4 \,|\, h(1) \,|\, \chi_4 \rangle) \tag{2.3.1}$$

$$= \frac{1}{2}(\langle \chi_3 \,|\, h(1) \,|\, \chi_3 \rangle + \langle \chi_4 \,|\, h(1) \,|\, \chi_4 \rangle)$$

thus

$$\langle \Psi_{12}^{34} \,|\, \mathcal{O}_1 \,|\, \Psi_{12}^{34} \rangle = \langle 3 \,|\, h \,|\, 3 \rangle + \langle 4 \,|\, h \,|\, 4 \rangle \tag{2.3.2}$$

$$\langle \Psi_0 \,|\, h(1) \,|\, \Psi_{12}^{34} \rangle = \frac{1}{2} \langle \chi_1(\mathbf{x}_1)\chi_2(\mathbf{x}_2) - \chi_2(\mathbf{x}_2)\chi_1(\mathbf{x}_1) \,|\, h(1) \,|\, \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \rangle$$

$$= \frac{1}{2}(0 - 0 - 0 + 0) \tag{2.3.3}$$

$$= 0$$

thus

$$\langle \Psi_0 \,|\, \mathcal{O}_1 \,|\, \Psi_{12}^{34} \rangle = 0 \tag{2.3.4}$$

Similarly, we get

$$\langle \Psi_{12}^{34} \,|\, \mathcal{O}_1 \,|\, \Psi_0 \rangle = 0 \tag{2.3.5}$$

4

Ex 2.9   From Eq. (2.92) in textbook, we get

$$\langle \Psi_0 \,|\, \mathscr{H} \,|\, \Psi_0 \rangle = \langle 1 \,|\, h \,|\, 1 \rangle + \ \langle 2 \,|\, h \,|\, 2 \rangle + \langle 12 \,|\, 12 \rangle - \langle 12 \,|\, 21 \rangle \tag{2.3.6}$$

From Ex 2.8, we get

$$\langle \Psi_0 \,\big|\, \mathcal{O}_1 \,\big|\, \Psi_{12}^{34} \rangle = \langle \Psi_{12}^{34} \,\big|\, \mathcal{O}_1 \,\big|\, \Psi_0 \rangle = 0 \tag{2.3.7}$$

thus

$$\begin{aligned}
\langle \Psi_0 \,\big|\, \mathscr{H} \,\big|\, \Psi_{12}^{34} \rangle &= \langle \Psi_0 \,\big|\, \mathcal{O}_2 \,\big|\, \Psi_{12}^{34} \rangle \\
&= \frac{1}{2} \left\langle \chi_1(\mathbf{x}_1)\chi_2(\mathbf{x}_2) - \chi_1(\mathbf{x}_2)\chi_2(\mathbf{x}_1) \,\bigg|\, \frac{1}{r_{12}} \,\bigg|\, \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \right\rangle \\
&= \langle 12 \,|\, 34 \rangle - \langle 12 \,|\, 43 \rangle
\end{aligned} \tag{2.3.8}$$

$$\begin{aligned}
\langle \Psi_{12}^{34} \,\big|\, \mathscr{H} \,\big|\, \Psi_0 \rangle &= \langle \Psi_{12}^{34} \,\big|\, \mathcal{O}_2 \,\big|\, \Psi_0 \rangle \\
&= \frac{1}{2} \left\langle \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \,\bigg|\, \frac{1}{r_{12}} \,\bigg|\, \chi_1(\mathbf{x}_1)\chi_2(\mathbf{x}_2) - \chi_2(\mathbf{x}_2)\chi_1(\mathbf{x}_1) \right\rangle \\
&= \langle 34 \,|\, 12 \rangle - \langle 34 \,|\, 21 \rangle
\end{aligned} \tag{2.3.9}$$

$$\begin{aligned}
\langle \Psi_{12}^{34} \,\big|\, \mathscr{H} \,\big|\, \Psi_{12}^{34} \rangle &= \left\langle \Psi_{12}^{34} \,\bigg|\, h(1) + h(2) + \frac{1}{r_{12}} \,\bigg|\, \Psi_{12}^{34} \right\rangle \\
&= 2 \times \frac{1}{2} \langle \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \,|\, h(1) \,|\, \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \rangle \\
&\quad + \frac{1}{2} \left\langle \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \,\bigg|\, \frac{1}{r_{12}} \,\bigg|\, \chi_3(\mathbf{x}_1)\chi_4(\mathbf{x}_2) - \chi_3(\mathbf{x}_2)\chi_4(\mathbf{x}_1) \right\rangle \\
&= \langle 3 \,|\, h \,|\, 3 \rangle + \langle 4 \,|\, h \,|\, 4 \rangle + \langle 34 \,|\, 34 \rangle - \langle 34 \,|\, 43 \rangle
\end{aligned} \tag{2.3.10}$$

2.3.2   Notations for 1- and 2-Electron Integrals

2.3.3   General Rules for Matrix Elements

Ex 2.10

$$\langle K \,|\, \mathscr{H} \,|\, K \rangle = \sum_m^N [m|h|m] + \frac{1}{2} \sum_m^N \sum_n^N \langle mn \,\|\, mn \rangle = \sum_m^N [m|h|m] + \frac{1}{2} \sum_m^N \sum_n^N \left([mm|nn] - [mn|nm] \right) \tag{2.3.11}$$

When $m = n$,

$$[mm|mm] - [mm|mm] = 0 \tag{2.3.12}$$

thus

$$\langle K \,|\, \mathscr{H} \,|\, K \rangle = \sum_m^N [m|h|m] + \frac{1}{2} \sum_m^N \sum_{n \neq m}^N \left([mm|nn] - [mn|nm] \right) = \sum_m^N [m|h|m] + \sum_m^N \sum_{n>m}^N \left([mm|nn] - [mn|nm] \right) \tag{2.3.13}$$

$$\langle \Psi_0 \,\big|\, \mathscr{H} \,\big|\, \Psi_{12}^{34} \rangle = \langle 12 \,\|\, 34 \rangle = \langle 12 \,|\, 34 \rangle - \langle 12 \,|\, 43 \rangle \tag{2.3.16}$$

$$\langle \Psi_{12}^{34} \,\big|\, \mathscr{H} \,\big|\, \Psi_0 \rangle = \langle 34 \,\|\, 12 \rangle = \langle 34 \,|\, 12 \rangle - \langle 34 \,|\, 21 \rangle \tag{2.3.17}$$

Which are exactly the same with Ex 2.9.

Ex 2.13 if $a = b$, $r = s$

$$\langle \Psi_a^r \,|\, \mathcal{O} \,|\, \Psi_b^s \rangle = \langle \Psi_a^r \,|\, \mathcal{O}_1 \,|\, \Psi_a^r \rangle = \sum_c^N \langle c \,|\, h \,|\, c \rangle - \langle a \,|\, h \,|\, a \rangle + \langle r \,|\, h \,|\, r \rangle \tag{2.3.19}$$

Ex 2.14

$$^N E_0 = \sum_m^N \langle m \,|\, h \,|\, m \rangle + \sum_m^M \sum_{n>m}^M \langle mn \,\|\, mn \rangle \tag{2.3.23}$$

$$^{N-1} E_0 = \sum_{m \neq a}^N \langle m \,|\, h \,|\, m \rangle + \sum_{m \neq a}^M \sum_{n>m, n \neq a}^M \langle mn \,\|\, mn \rangle \tag{2.3.24}$$

$$^N E_0 - {}^{N-1} E_0 = \langle a \,|\, h \,|\, a \rangle + \sum_{b \neq a}^N \langle ab \,\|\, ab \rangle \tag{2.3.25}$$

2.3.4 Derivation of the Rules for Matrix Elements

Ex 2.15

$$\langle \Psi \,|\, \mathscr{H} \,|\, \Psi \rangle = \frac{1}{N!} \left\langle \sum_{n=1}^{N!} (-1)^{p_n} \mathscr{P}_n \{\chi_i(1)\chi_j(2)\cdots\chi_k(N)\} \,\left|\, \sum_{c=1}^N h(c) \,\right|\, \sum_{m=1}^{N!} (-1)^{p_m} \mathscr{P}_m \{\chi_i(1)\chi_j(2)\cdots\chi_k(N)\} \right\rangle$$

$$= \frac{1}{N!} \sum_{n=1}^{N!} \sum_{m=1}^{N!} (-1)^{p_n+p_m} \sum_{c=1}^N \langle \mathscr{P}_n \{\chi_i(1)\chi_j(2)\cdots\chi_k(N)\} \,|\, h(c) \,|\, \mathscr{P}_m \{\chi_i(1)\chi_j(2)\cdots\chi_k(N)\} \rangle \tag{2.3.26}$$

Since the integral inside equals 0 when $\mathscr{P}_n \neq \mathscr{P}_m$,

$$\langle \Psi \,|\, \mathscr{H} \,|\, \Psi \rangle = \frac{1}{N!} \sum_{n=1}^{N!} (-1)^{p_n+p_n} (\varepsilon_i + \varepsilon_j + \cdots + \varepsilon_k) = \varepsilon_i + \varepsilon_j + \cdots + \varepsilon_k \tag{2.3.27}$$

Ex 2.16

$$\langle K \,|\, \mathscr{H} \,|\, L \rangle = \frac{1}{\sqrt{N!}} \sum_{n=1}^{N!} \langle (-1)^{p_n} \mathscr{P}_n K^{HP} \,|\, \mathscr{H} \,|\, L \rangle$$

$$= \frac{1}{\sqrt{N!}} \sum_{n=1}^{N!} \langle K^{HP} \,|\, \mathscr{H} \,|\, L \rangle$$

$$= \frac{1}{\sqrt{N!}} \times N! \langle K^{HP} \,|\, \mathscr{H} \,|\, L \rangle$$

$$= \sqrt{N!} \langle K^{HP} \,|\, \mathscr{H} \,|\, L \rangle \tag{2.3.28}$$

2.3.5 Transition from Spin Orbitals to Spatial Orbitals

Ex 2.17

$$\begin{aligned} |1\rangle = |\psi_1 \alpha\rangle \quad & |2\rangle = |\psi_1 \beta\rangle \\ |3\rangle = |\psi_2 \alpha\rangle \quad & |4\rangle = |\psi_2 \beta\rangle \end{aligned} \tag{2.3.29}$$

thus

$$\begin{aligned} \mathbf{H} &= \begin{pmatrix} \langle 1 \,|\, h \,|\, 1 \rangle + \langle 2 \,|\, h \,|\, 2 \rangle + \langle 12 \,|\, 12 \rangle - \langle 12 \,|\, 21 \rangle & \langle 12 \,|\, 34 \rangle - \langle 12 \,|\, 43 \rangle \\ \langle 34 \,|\, 12 \rangle - \langle 34 \,|\, 21 \rangle & \langle 3 \,|\, h \,|\, 3 \rangle + \langle 4 \,|\, h \,|\, 4 \rangle + \langle 34 \,|\, 34 \rangle - \langle 34 \,|\, 43 \rangle \end{pmatrix} \\ &= \begin{pmatrix} 2(1|h|1) + (11|11) & (12|12) \\ (21|21) & 2(2|h|2) + (22|22) \end{pmatrix} \end{aligned} \tag{2.3.30}$$

Ex 2.18

$$

\tag{2.3.31}
$$

Let's calculate $E_0^{(2)}$ term by term.

$$
\begin{aligned}
\left(E_0^{(2)} \right)_1 &= \frac{1}{4} \sum_{abrs} \frac{[ar|bs]^2}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} \\
&= \frac{1}{4} \sum_{a,b}^{N/2} \sum_{r,s=N/2+1}^{K} \frac{[ar|bs]^2 + [\bar{a}\bar{r}|bs]^2 + [ar|\bar{b}\bar{s}]^2 + [\bar{a}\bar{r}|\bar{b}\bar{s}]^2}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} \\

\end{aligned}
\tag{2.3.32}
$$

$$
\begin{aligned}
\left(E_0^{(2)} \right)_2 &= \frac{1}{4} \sum_{abrs} \frac{-2[ar|bs][as|br]}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} \\
&= -\frac{1}{2} \sum_{a,b}^{N/2} \sum_{r,s=N/2+1}^{K} \frac{[ar|bs][as|br] + [\bar{a}\bar{r}|\bar{b}\bar{s}][\bar{a}\bar{s}|\bar{b}\bar{r}]}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} \\
&= -\sum_{a,b}^{N/2} \sum_{r,s=N/2+1}^{K} \frac{[ar|bs][as|br]}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} \\

\end{aligned}
\tag{2.3.33}
$$

$$
\begin{aligned}
\left(E_0^{(2)} \right)_3 &= \frac{1}{4} \sum_{abrs} \frac{[as|br]^2}{\varepsilon_a + \varepsilon_b - \varepsilon_r - \varepsilon_s} = \frac{1}{4} \sum_{absr} \frac{[ar|bs]^2}{\varepsilon_a + \varepsilon_b - \varepsilon_s - \varepsilon_r} \\

\tag{2.3.34}
$$

thus,

$$

2.3.7 Pseudo-Classical Interpretation of Determinantal Energies

Ex 2.23 a.-g. can be obtained immediately with definition.

2.4 Second Quantization

2.4.1 Creation and Annihilation Operators and Their Anticommutation Relations

Ex 2.24 Since $a_i^\dagger a_j^\dagger + a_j^\dagger a_i^\dagger = 0$, we have

$$(a_1^\dagger a_2^\dagger + a_2^\dagger a_1^\dagger)\,|K\rangle = 0 \tag{2.4.1}$$

for any $|K\rangle$.

Ex 2.25 Since $a_i a_j^\dagger + a_j^\dagger a_i = \delta_{ij}$, we have

$$(a_1 a_2^\dagger + a_2^\dagger a_1)\,|K\rangle = 0 \tag{2.4.2}$$

$$(a_1 a_1^\dagger + a_1^\dagger a_1)\,|K\rangle = |K\rangle \tag{2.4.3}$$

for any $|K\rangle$.

Ex 2.26

$$\langle \chi_i \,|\, \chi_j \rangle = \left\langle 0 \,\middle|\, a_i a_j^\dagger \,\middle|\, 0 \right\rangle = \left\langle 0 \,\middle|\, \delta_{ij} - a_j^\dagger a_i \,\middle|\, 0 \right\rangle = \delta_{ij} \tag{2.4.4}$$

where $|0\rangle$ is the vacuum state.

Ex 2.27 First, if $i \notin \{1, 2, \cdots, N\}$ or $j \notin \{1, 2, \cdots, N\}$,

$$\left\langle K \,\middle|\, a_i^\dagger a_j \,\middle|\, K \right\rangle = 0 \tag{2.4.5}$$

because inexistent electron cannot be annihilated.
Thus, $i, j \in \{1, 2, \cdots, N\}$, and

$$\left\langle K \,\middle|\, a_i^\dagger a_j \,\middle|\, K \right\rangle = \delta_{ij} \langle K \,|\, K \rangle - \left\langle K \,\middle|\, a_j a_i^\dagger \,\middle|\, K \right\rangle \tag{2.4.6}$$

$\left\langle K \,\middle|\, a_j a_i^\dagger \,\middle|\, K \right\rangle$ would be 0 because χ_i is created twice. Thus,

$$\left\langle K \,\middle|\, a_i^\dagger a_j \,\middle|\, K \right\rangle = \delta_{ij} \tag{2.4.7}$$

Overall, $\left\langle K \,\middle|\, a_i^\dagger a_j \,\middle|\, K \right\rangle = 1$ when $i = j$ and $i \in \{1, 2, \cdots, N\}$, but is 0 otherwise.

Ex 2.28

a. That's obvious since inexistent electron cannot be annihilated.

b. That's obvious since an electron cannot be created twice.

c.
$$\begin{aligned}
a_r^\dagger a_a \left|\Psi_0\right\rangle &= a_r^\dagger a_a (-\left|\chi_a \cdots \chi_1 \chi_b \cdots \chi_N\right\rangle) \\
&= -a_r^\dagger \left|\cdots \chi_1 \chi_b \cdots \chi_N\right\rangle \\
&= -\left|\chi_r \cdots \chi_1 \chi_b \cdots \chi_N\right\rangle \\
&= \left|\chi_1 \cdots \chi_r \chi_b \cdots \chi_N\right\rangle \\
&= \left|\Psi_a^r\right\rangle
\end{aligned}$$
(2.4.8)

d. That's similar to 2.28.c.

e.
$$\begin{aligned}
a_s^\dagger a_b a_r^\dagger a_a \left|\Psi_0\right\rangle &= a_s^\dagger a_b a_r^\dagger (-\left|\chi_2 \cdots \chi_1 \chi_b \cdots \chi_N\right\rangle) \\
&= -a_s^\dagger a_b \left|\chi_r \chi_2 \cdots \chi_1 \chi_b \cdots \chi_N\right\rangle \\
&= -a_s^\dagger (-\left|\chi_2 \cdots \chi_1 \chi_r \cdots \chi_N\right\rangle) \\
&= \left|\chi_s \chi_2 \cdots \chi_1 \chi_r \cdots \chi_N\right\rangle \\
&= \left|\chi_1 \cdots \chi_r \chi_s \cdots \chi_N\right\rangle \\
&= \left|\Psi_{ab}^{rs}\right\rangle
\end{aligned}$$
(2.4.9)

$\therefore$
$$\left|\Psi_{ab}^{rs}\right\rangle = a_s^\dagger a_b a_r^\dagger a_a \left|\Psi_0\right\rangle = a_s^\dagger (-a_r^\dagger a_b) a_a \left|\Psi_0\right\rangle = a_r^\dagger a_s^\dagger a_b a_a \left|\Psi_0\right\rangle$$
(2.4.10)

f. That's similar to 2.28.e.

2.4.2 Second-Quantized Operators and Their Matrix Elements

Ex 2.29

$$\begin{aligned}
\left\langle \Psi_0 \left| \mathcal{O}_1 \right| \Psi_0 \right\rangle &= \sum_{ij} \langle i \left| h \right| j \rangle \left\langle 0 \right| a_2 a_1 a_i^\dagger a_j a_1^\dagger a_2^\dagger \left| 0 \right\rangle \\
&= \sum_{ij} \langle i \left| h \right| j \rangle \left\langle 0 \right| a_2 a_1 (\delta_{ij} - a_j^\dagger a_i) a_1^\dagger a_2^\dagger \left| 0 \right\rangle \\
&= \sum_{i} \langle i \left| h \right| i \rangle \left\langle 0 \right| a_2 a_1 a_1^\dagger a_2^\dagger \left| 0 \right\rangle - \sum_{ij} \langle i \left| h \right| j \rangle \left\langle 0 \right| a_2 a_1 a_j a_i^\dagger a_1^\dagger a_2^\dagger \left| 0 \right\rangle
\end{aligned}$$
(2.4.11)

The second terms must be 0 since $i \in 1, 2$.
Thus,
$$\left\langle \Psi_0 \left| \mathcal{O}_1 \right| \Psi_0 \right\rangle = \sum_i \langle i \left| h \right| i \rangle \left\langle 0 \right| a_2 a_1 a_1^\dagger a_2^\dagger \left| 0 \right\rangle = \langle 1 \left| h \right| 1 \rangle + \langle 2 \left| h \right| 2 \rangle$$
(2.4.12)

Ex 2.30

\end{aligned}
$$

According to Ex. 2.27, we have

$$
\begin{aligned}

$$\mathscr{H}\mathscr{A}\,|\Phi\rangle = \mathscr{A}\mathscr{H}\,|\Phi\rangle = \mathscr{A}E\,|\Phi\rangle = E\mathscr{A}\,|\Phi\rangle \tag{2.5.13}$$

thus $\mathscr{A}\,|\Phi\rangle$ is also an eigenfunction of $\mathscr{H}$ with eigenvalue E.

Ex 2.36

$$\langle\Psi_1\,|\,\mathscr{H}\mathscr{A}\,|\,\Psi_2\rangle = a_2\,\langle\Psi_1\,|\,\mathscr{H}\,|\,\Psi_2\rangle \tag{2.5.14}$$

Since $[\mathscr{A}, \mathscr{H}] = 0$ and $\mathscr{A}$ is Hermitian,

2.5.2 Restricted Determinants and Spin-Adapted Configurations

Ex 2.38   From Ex 2.37, we have

$$\hat{\mathscr{S}}_z |\psi_i\bar{\psi}_i\psi_j\bar{\psi}_j \cdots\rangle = 0 \tag{2.5.19}$$

thus

$$\hat{\mathscr{S}}_z^2 |\psi_i\bar{\psi}_i\psi_j\bar{\psi}_j \cdots\rangle = 0 \tag{2.5.20}$$

While

Since

$$\hat{\mathbf{s}}_+(a)\psi_k(a) = 0 \quad \hat{\mathbf{s}}_+(a)\bar{\psi}_k(a) = \psi_k(a) \tag{2.5.22}$$

$$\hat{\mathscr{S}}_+ |\psi_i\bar{\psi}_i \cdots \psi_k\bar{\psi}_k \cdots\rangle = \sum_a^N 0 = 0 \tag{2.5.23}$$

thus

$$\hat{\mathscr{S}}_-\hat{\mathscr{S}}_+ |\psi_i\bar{\psi}_i\psi_j\bar{\psi}_j \cdots\rangle = 0 \tag{2.5.24}$$

Therefore,

$\therefore$

$$\hat{\mathscr{S}}^2 |^1\Psi_1^2\rangle = 0 \tag{2.5.29}$$

thus $|^1\Psi_1^2\rangle$ is singlet.
